

Thomas Pedberezna, Jr

BS of Computer Science, Northeastern Univ., *magna cum laude* (2014 - 2019)

tom [at] tomped [dot] com | tomped.com | github.com/tomped

EXPERIENCE

Intuit

Sr. Software Engineer

Sep 2022 – Sep 2024

Software Engineer II

Sep 2020 – Sep 2022

Software Engineer I

Aug 2019 – Sep 2020

Enterprise-Scale Data Architecture Transformation

- Led migration from Vertica to an S3-based data lake, saving seven figures in infrastructure costs while ensuring data parity and zero downtime
- Owned and maintained 5+ Spark pipelines on EMR, delivering scalable and reliable data processing
- Designed and implemented the an abandonment pipeline, analyzing TurboTax clickstream data to surface user drop-off patterns

Developer Productivity & Engineering Enablement

- Partnered weekly with ~15 tax experts to design and deliver the CPA Tool (Electron app), gathering requirements, prioritizing features, and iterating quickly to meet evolving needs
- Successfully deployed the CPA Tool to 100+ users during peak tax season, enabling efficient identification and resolution of tax data issues with zero P0/P1 incidents
- Built strong trust with stakeholders by providing responsive support and clear prioritization, ensuring they felt cared for throughout the migration
- Spearheaded creation of Testable, collaborating with a cross-functional team to design, implement, and launch a secure test-data generation tool used across the Data Engineering Team
- Drove Testable through security and design reviews, ensuring compliance and enterprise readiness, while reducing test-data creation time from hours to minutes
- Enhanced DBDeploy with dataset-level deployments, reducing release time and decoupling dependencies
- Standardized CI/CD pipelines across multiple projects, improving iteration speed and efficiency

Technical Leadership & Mentorship

- Directed cross-functional initiatives that delivered high-impact cost savings and pipeline performance gains, including spark tuning, leveraging set operations, and curated job dependencies
- Mentored junior engineers through design discussions, code reviews, and pair programming, fostering growth and innovation
- Partnered with analysts and product stakeholders to ensure pipelines aligned with evolving business needs

RELATED WORK

Deadlake

Jan 2025 – Present

- Built a data lakehouse for Deadlock, a competitive team game, using Scala, Spark, and Apache Iceberg on AWS S3/Glue
- Designed many typed ETL pipelines with incremental upserts, partitioning, and watermark tracking for reliable reprocessing via Iceberg metadata
- Optimized performance through Spark tuning, partition pruning, and broadcast joins
- Managed infra as code with Terraform, creating S3 buckets, IAM roles, and Glue Jobs
- Focused on analytics outcomes, enabling hero and item level dashboards from match-level facts

TECHNICAL SKILLS

Programming

Scala, Python, Node.js, Express.js, SQL

Big Data & Cloud

Spark, Apache Iceberg, AWS (S3, EMR, Glue, Lambda, IAM)

Testing & Devops

CI/CD, pytest, ScalaTest, Terraform
